

ABSTRACT OF THE DISCLOSURE

An enclosure for closed-circuit television cameras comprising a box-like
5 composite body which is closed on a working side by a wall which
comprises a transparent plate supported by a frame which is fixed to the
body, an opposite side being closed by a removable cover which allows
insertion of a television camera; the frame forms a seat for the plate with an
abutment surface which is directed outward so as to allow assembly of the
10 plate from the outside inward.
